Course Description

Most quantitative courses (importantly) focus on the final steps of data analysis—conducting and understanding statistical tests. However, much of the work in data science is taking raw data, often from multiple, incompatible sources, and processing those data into a usable form. This course will emphasize the importance of robust, documented, and automated workflows for processing data to save time, reduce errors, improve reproducibility, and facilitate collaboration among multiple researchers. We will also spend time on data visualization and communication—an important part of creating, checking, and collaborating on data workflows. We will use the R programming language, Github, and Rmarkdown to work through examples, but the focus is on concepts/best practices that can be applied to any software or programming language. The course is open to students who have little programming experience or experience with R. The goal is for students at all levels of programming experience to set goals to improve their data science skills.

Course Objectives

The goals of this course are for you to critically analyze and improve your data analysis workflows. Implementing robust, automated procedures for handling data will allow you to:

- Foster open science through increased transparency, reproducibility, and easier data sharing
- Increase the fidelity of your data and analyses by detecting and preventing errors
- Better understand and communicate about your data
- Save time by preventing errors, automating tasks, and reusing code
- Facilitate collaboration with organized and documented workflows

Course Materials

- The course Github page has links to project files, readings, and the syllabus
- We will work through examples and complete assignments through a course workspace on RStudio Online. To sign up, follow this link. You will need to create a free user account. We will go over how to access materials on the first day of class.
- Readings from *R for Data Science* (Wickham & Grolemund, 2017) are available online.
- PDFs of other course readings referenced below are available on Github.

Other helpful resources

- *R Markdown: The Definitive Guide*
- papaja: Reproducible APA manuscripts with R Markdown
- RStudio cheatsheets for base R, data import, ggplot, R Markdown, and other packages.

Course Policies

TBD

Assignments and Grading

Remote Instruction

Class Schedule

Readings should be completed prior to each class.

Week 01, 01/06: Course Goals

- Goals of the class
- Logistics (RStudio/Github)
- Readings and assignments
- *OPTIONAL:* Intro R lessons using swirl()

Week 02, 01/13: Data Workflow

- File organization
- Version control
- Workflow examples [John's data "Show and Tell"]
- *SKILLS:* Basic I/O functions, getting help, using Github
- **READING:** Minimizing Mistakes (Rouder, Haaf, & Snyder, 2019)

Week 03, 01/20: Automation

- Copy/paste is evil (automating data pipeline)
- Drop-down menus are evil (automating your analyses)
- Machine-readable formats
- *SKILLS:* Basic scripting, iteration, merging data

Week 04, 01/27: Data "Show and Tell"

- Present your current workflow
- Identify places for potential errors
- Identify places to increase efficiency/automation

Week 05, 02/03: Data Structure

- Data types
- Data organization (variables/observations)
- *SKILLS:* Factors/strings, reshaping/aggregating data
- **READING:** Tidy Data (Wickham, 2014)

Week 06, 02/10: Error Checking

- Data validation
- Automating visualizations
- Exploratory data analysis
- *SKILLS:* Logical statements, indexing, basic visualizations

Week 07, 02/17: Encapsulation: Reusing Functions

- Best option: Use existing APIs and packages
- Next best option: Writing your own general-purpose functions
- Not great option: Writing overly-specific functions that you can never use again
- *SKILLS:* Sourcing functions, parameterization

Week 08, 02/24: Reproducible Reports and Documentation

- Code as documentation
- Documentation faciliates collaboration and data sharing
- Reproducible reports/data capsules preserve analyses
- *SKILLS:* Rmarkdown, papaja, package control
- **READING:** Transparency in psychological science (Klein et al., 2018)

Week 09, 03/03: Visualization

- Communicating through graphical styles
- Interactive/animated plots for data exploration
- *SKILLS:* ggplot and extensions
- **READING:** Designing graphs for decision-makers (Zacks & Franconeri, 2020)

Week 10, 03/10: Project Presentations

- How have you changed your workflow?
- What have you learned about your data?
- What problems are still unresolved?
